

Telemedicine Made Simple by iHomeCare

iHomeCare application enables a nurse in a hospital or a homecare environment to use iPad/iPhone or Android phone/tablet to capture the vitals using iHealth medical devices.

- The vitals can be instantly sent to the respective doctor or doctors who can accept the email and check the patient history using EHR software and take immediate medical action.
- Vitals are loaded into an ONC-2014 Certified EHR MURx for diagnosis and medical action.
- Eliminates the effort to manually enter vitals in computer or write the vitals on paper.
- If the vitals are below or above a certain level, as specified for the particular patient, a text message alert is sent to the doctor/hospital.
- Capture of information for Oasis, Meaningful Use (ONC-2014 Certified) Compliance reports.
- If the hospital is using any other EHR /Electronic Medical devices we can integrate iHomeCare with their EHR or medical devices.

Patient Clinical Documentation & MURx

- Clinical Document of a patient will be generated in xslt format.
- HL7 coding standards followed for the document.
- ICD code used for Diagnosis.
- Data can be easily transferred between HL7 complaint systems.
- Provides complete information to the referral doctor.
- Base for insurance claims.

Clinical Documentation For Homecare

Outcome & Assessment Information Set (OASIS)

- Outcome and Assessment Information Set (OASIS).
- Document as per OASIS 2015 specification.
- ICD-9 CM Code Set followed.
- Complete Clinical documentation for Home Care patients.
- Secure access for updating the document on Portal.

Clinical Documentation For Cancer Registries

- Clinical Document created in HL7 prescribed format.
- Document can be submitted online to central cancer registries.

Clinical Documentation For Immunization Registries

- Clinical Document for Immunization created in HL7 prescribed format.
- Complete Immunization details captured.
- Adverse effects of Immunization also recorded.
- Document can be submitted online to central immunization registries.

Patient Clinical Document Contents

- 1 Allergies, Adverse Reactions, Alerts
- 2 Medications
- 3 Problems
- 4 Procedures
- 5 Results
- 6 Advance Directives
- 7 Encounters
- 8 Family History
- 9 Immunizations
- 10 Medical Equipment
- 11 Insurance Providers
- 12 Plan of Care
- 13 Social History
- 14 Vital Signs

MURx Modules

- Patient Registration
- Appointment Scheduling
- Visit Management
- Order Entry & Reporting
- E-Prescribing
- Clinical Decision Support
- Drug Interaction & Adverse Drug Reactions
- Clinical Notes & Template Builder
- Referral Management
- Customize Reports
- MURx Patient Chart
- Vital Signs & Growth Chart
